

## KulanKendi Server Client Manual

This program use only USB DCU60 interface to communicate with phone so please use proper(USB-DCU60) interface.

You need EPIUSB drivers installed first.

To install the USB Flash Drivers:

1. Before you install the drivers, make sure that:
  - The phone is fully charged.
  - The USB cable is connected to the computer.
2. Turn the mobile phone off.
3. Remove and replace the battery to completely restart the phone.  
It is important to always do a complete restart of the phone, by removing the battery, before you install drivers or flash phone.
4. Press and hold 'C' and attach the USB cable to the phone.  
The New Found Hardware wizard should automatically start.
5. Choose Install automatically (recommended) and click Next.  
If the hardware wizard is unable to locate the drivers automatically, select them manually.

---

After flashing FS(File System) area, all customization data are erased. It's necessary to mark 'Finalization' option before flash to make phone working.

Thank You for using our service.
